The Problem and Solution

The Problem:

- Scattered Information: Our digital notes are fragmented across countless apps.
- Lost Connections: We lose the valuable relationships between our ideas.
- Blocked Insight: This chaos prevents us from seeing the bigger picture.

The Solution:

- Centralize: Knowledge Web brings all your ideas into a single, visual hub.
- Connect: It maps the relationships between topics, revealing hidden patterns.
- Clarify: It transforms clutter into clarity, unlocking new insights.

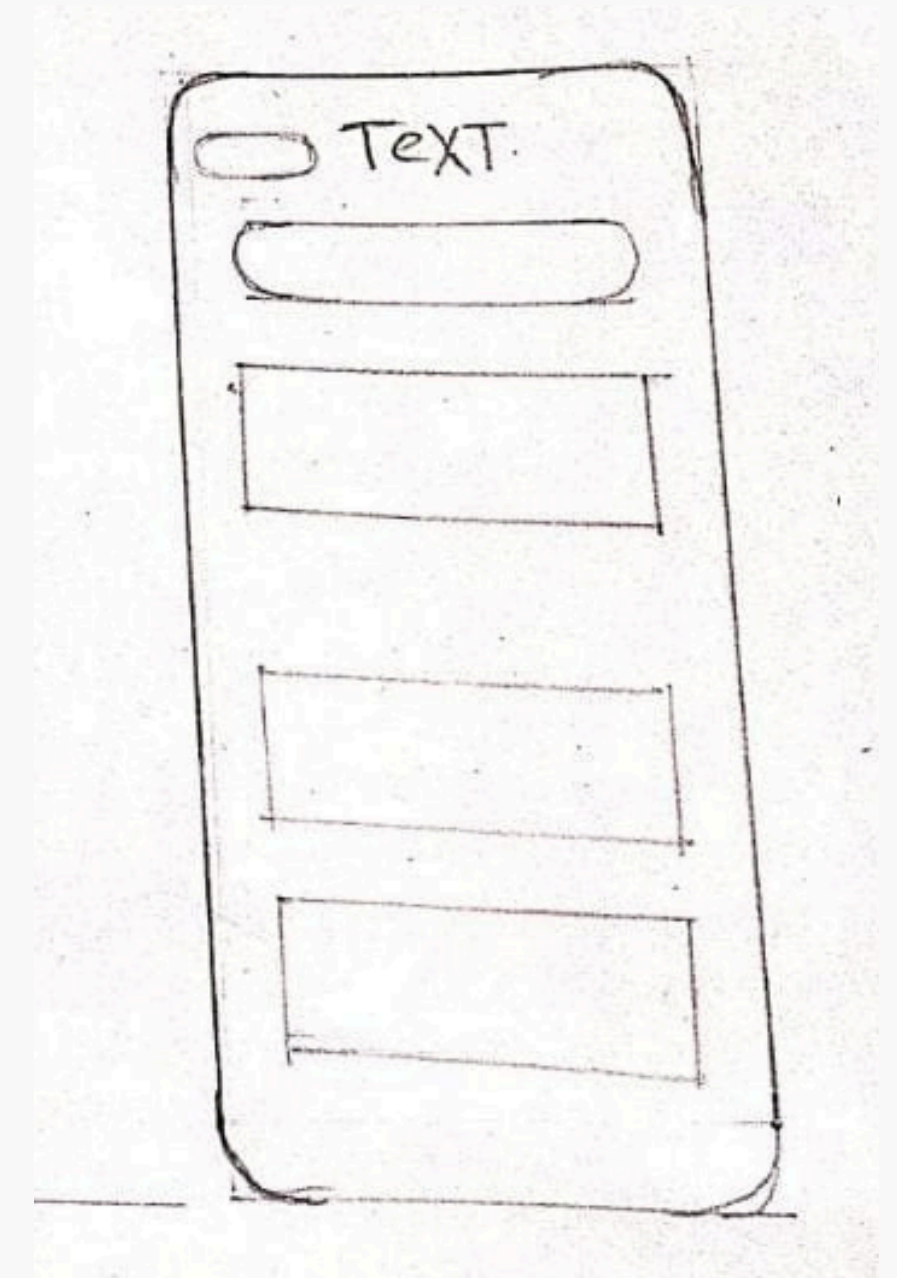

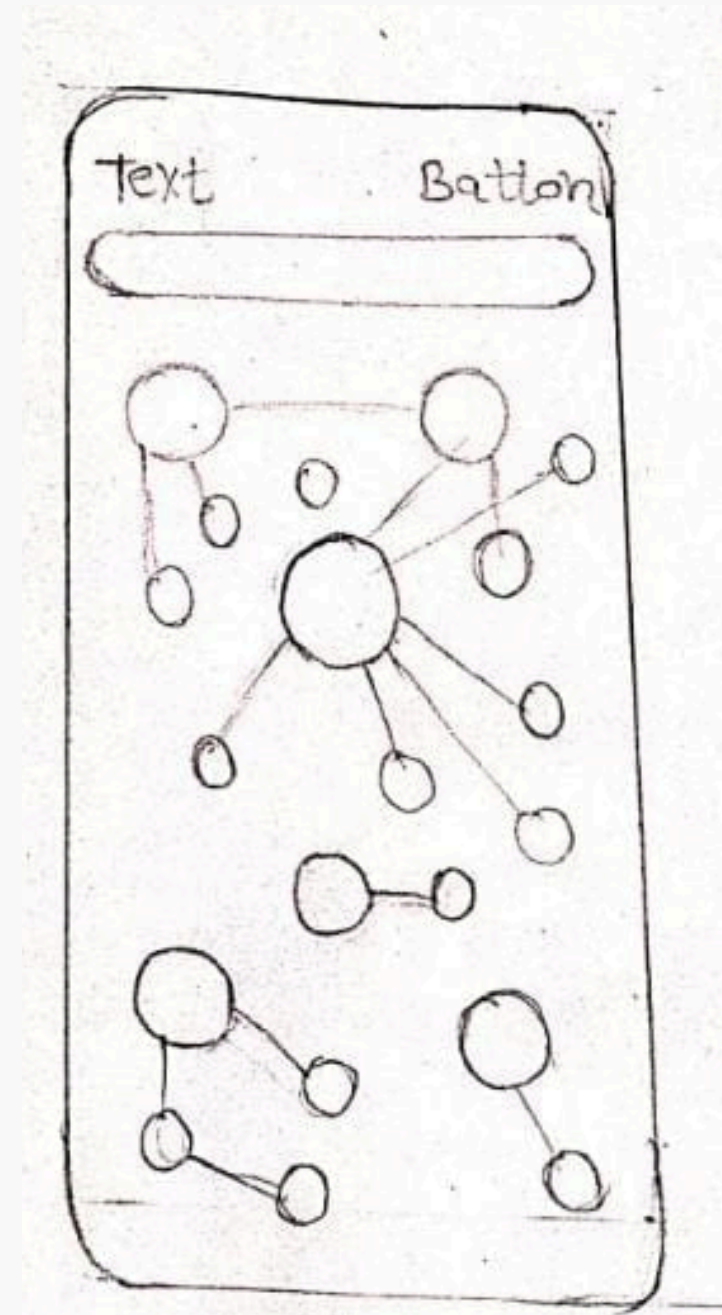

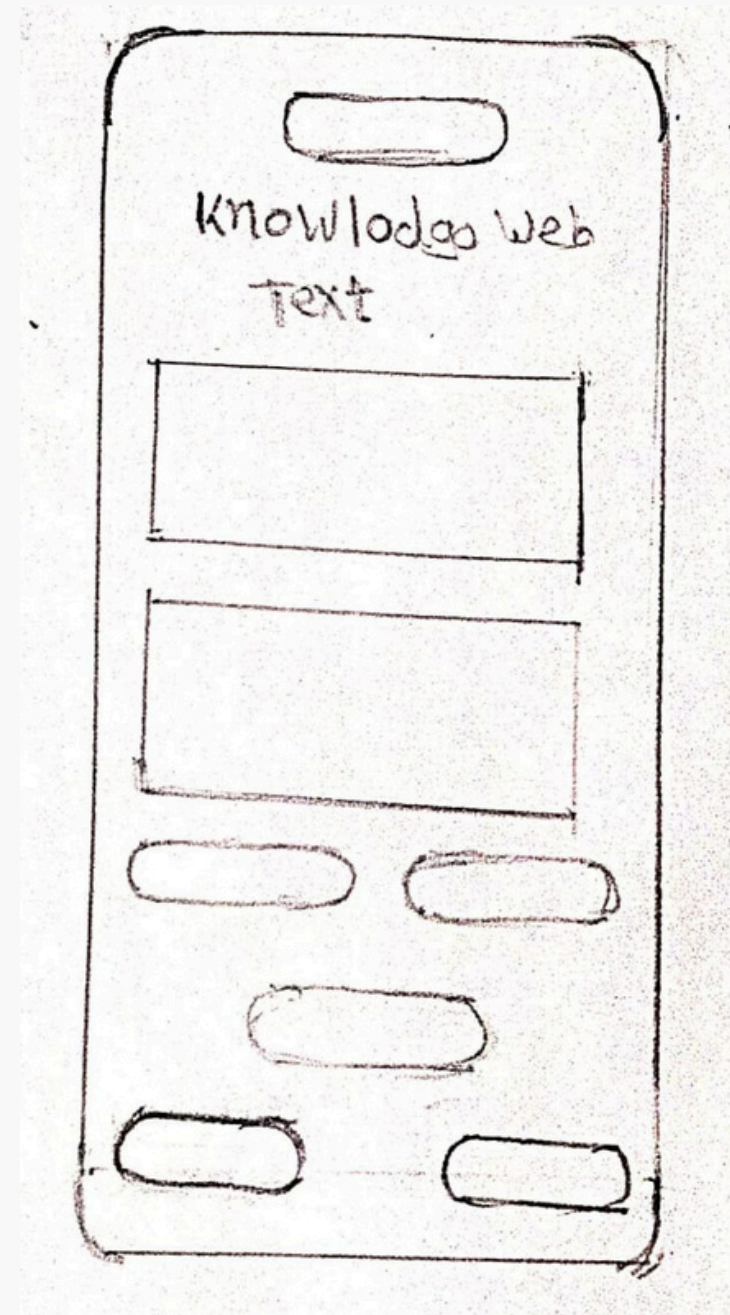

User Persona

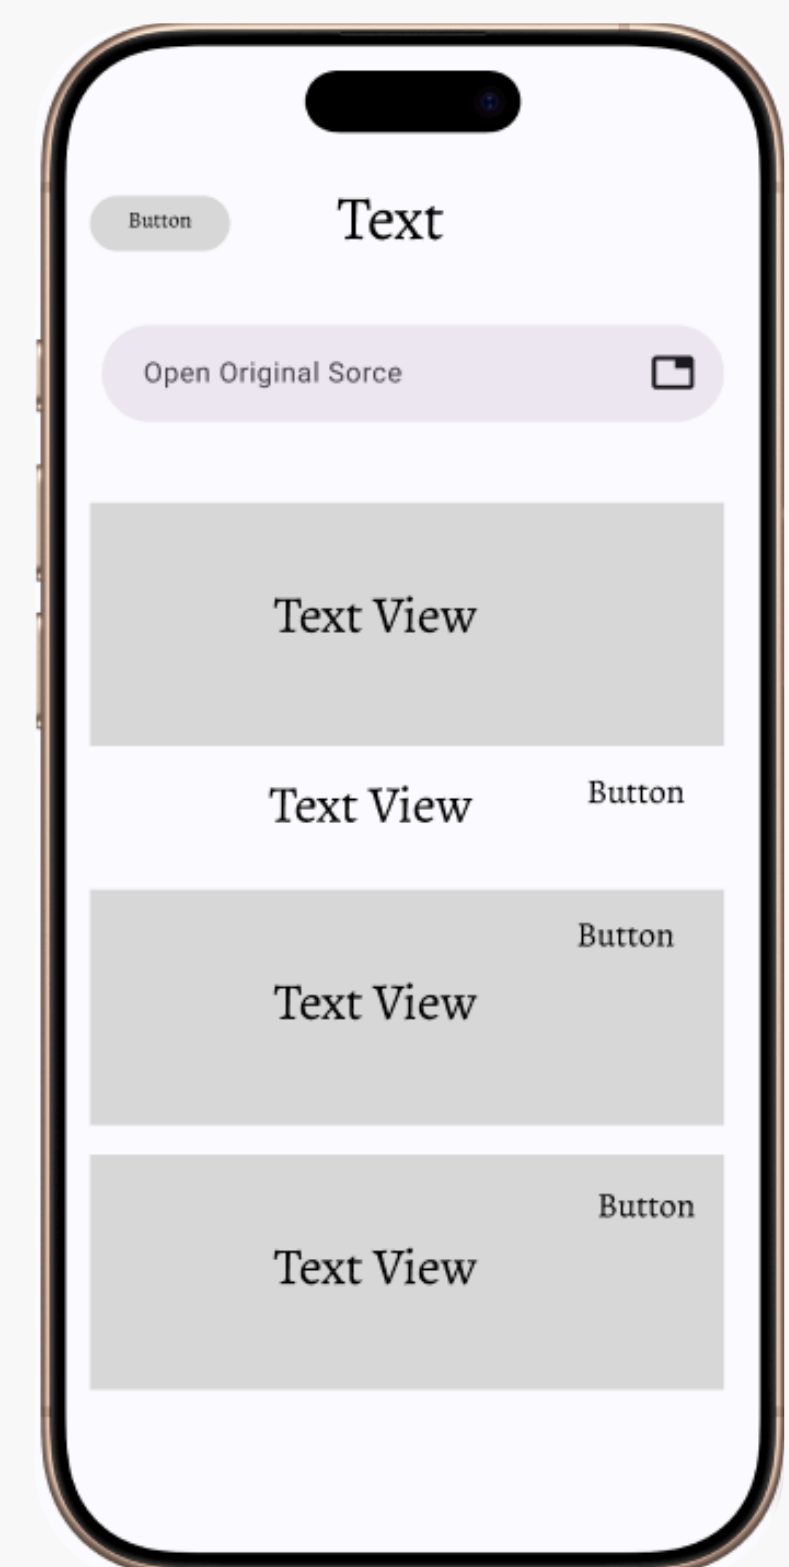

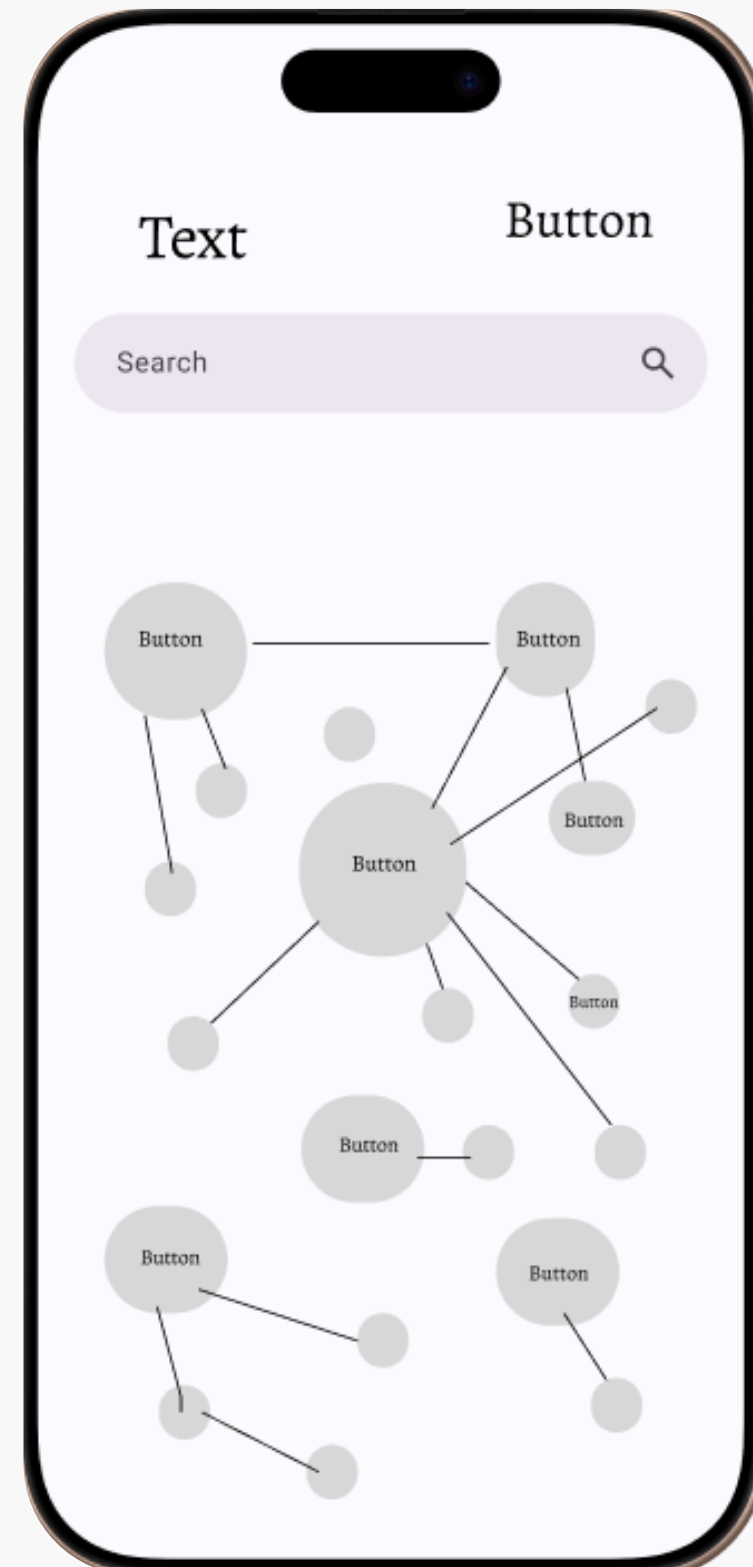

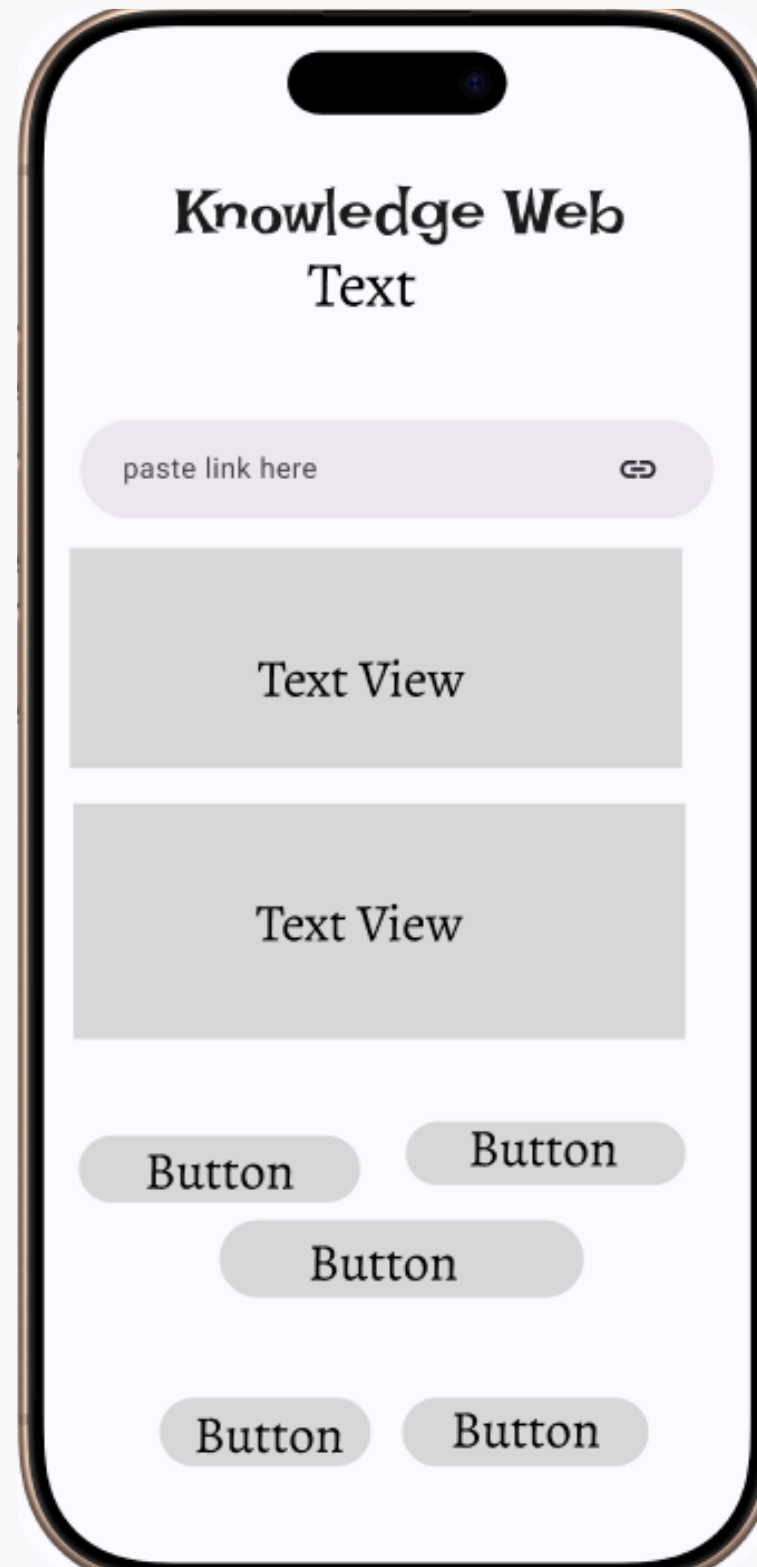

- **Occupation:** PhD Candidate, Age 28
- **Goal:** To bring together complex information and discover new connections for his dissertation.
- **Frustration:** “My notes are all over the place! I can’t see how everything connects.”
- **Behavior:** Spends hours researching online and often sketches mind maps on paper to make sense of ideas.

Cognitive Psychology Principles

Title	Explanation
Hick’s Law	Our visual Galaxy View simplifies navigation and reduces decision-making time compared to a simple list.
Gestalt Principles	The knowledge graph visually connects related topics, helping users instantly understand relationships.
Miller’s Law	Information is chunked into small, digestible lists to avoid overwhelming the user’s working memory.
